

Create your own Microservice project in IntelliJ

Create a Eureka Server

Create a Cloud Config server which reads the configuration from your Github repo

Create a Spring cloud gateway server

Create a UserServer(Eureka client), and create a user controller. Read property from cloud and return it to the frontend.

What you need to submit:

A screenshot of your microservice structure in your IntelliJ

A screenshot of your github repo

A screenshot of your browser visiting your user controller(Make sure you visit the user server through the gateway).
