

For today's coding homework, here are the requirements:

1. Add a new role to the application.
2. Create a method in the controller with a get mapping path, and make sure this method(endpoint) can only be visited by the users with the role you just created.
3. Register a user with the role you just created.
4. Visit your method.

You need to include three screenshots in your submission:

A screenshot of registration on Postman(please show the request body and response body);

A screenshot of login on Postman(please show the request body and response body);

A screenshot of visiting your endpoint on Postman(please show the request body and response body). The request body should contain the jwt token you received in the response of login. The response should have a status of 200 OK.
